

ABSTRACT OF THE DISCLOSURE

The present invention relates to an improved storage wrap material comprising a sheet of material comprising one or more layers and having a first, active side and a second side. The sheet comprises a plurality of protrusions integral with the first active side and the second side. The protrusions comprise from about 30% to about 70% of the first active side. The storage wrap material also comprises an adhesive continuously disposed upon the first active side.
